INTERCOM WITH VDP

INDOOR STATION | OUTDOOR STATION | MULTI APARTMENT SYSTEM | VDP WITH INTERCOM

When someone press the call button on outdoor unit, it will activate the indoor monitor, monitor will turn on, ring and show the video outside. So you can see who is outside, a postman? a neighbor? a salesman? an old friend? or a burglar?

Then you can press the response button on monitor to talk with the people outside, unlock the lock and press the response button again to end the conversion. When the monitor in standby mode, you can see what's going on outside by press monitoring button.

MOBILE SURVEILLANCE (FOR VEHICLES)

For public safety departments, time is a valuable but scarce resource. And that's problematic, especially since the number of threats in the world is rising steadily. Essential for maintaining high safety levels is the use of innovative technologies. Mobile surveillance is becoming a critical tool in the field of video surveillance. Designed to speed up processes and enable more efficient working, mobile surveillance technology is increasingly becoming the preferred standard

A vehicle tracking system combines the installation of an electronic device in a vehicle, or fleet of vehicles. With Mobile Surveillance one can have a live view of the insides of the vehicle at any given point of time . In order to keep track of the status of vehicle anywhere, anytime.

BOOM BARRIER GATES

There are various technologies for an automatic boom barrier. One of them is electro-mechanical, which is widely used due to its reliability. The other technologies are often manufacturer specific. Boom gates are typically found at crossings, parking facilities, checkpoints and entrances to restricted areas.

We Provide Solutions for All Kinds of Boom Barriers MANUAL / AUTO with RFID (Radio-frequency identification)
Car Barriers | Pedestrian Barriers

PARKING RESERVATIONS RFID (Radio-frequency identification)

- A vehicle tracking system combines the installation of an electronic device in a vehicle, or fleet of vehicles.

RFID Detects the car and allows only the registered car to park in the reserved parking. the barrier does not open until the RFID matches.

VIDEO WALL

Modern video wall technology has become more cost-efficient, enabling their use in almost any application. Video walls to engage audiences. Digital signs and billboards are highly engaging and work to catch the eye of passers-by like no other technology can. Data Visualization and Collaboration. Plenty of other uses.

BIOMETRIC

PASSWORD / CARD / FINGER /FACE / RETINA / HOTEL CARD PARKING RESERVATION / LOCKER LOCKS WITH RFID CARD

BIOMETRIC ATTENDANCE - Biometric time and attendance system has brought more precise system to measure group or individual's activities and attendance as well. ... Biometric attendance system is a foolproof technology to ensure the accuracy of attendance and is useful to the ones who deal with large number of employees.

FINGERPRINT DOOR LOCK - Finger is scanned and the fingerprint pattern is detected and used for access control through a keyless door lock.

HOTEL LOCK SYSTEMS - Hotel Lock System are new and improved way of being able to access a room or home without having to use a bulky key.

ID CARDS - A Plastic RFID Card with a Person Name, often bearing a Photograph, that gives identifying data, such as Name, Age and Organizational Information.

VISITOR MANAGEMENT - Visitor management refers to tracking the usage of a public building or site. By gathering increasing amounts of information, a visitor management system can record the usage of the facilities by specific visitors and provide documentation of visitor's whereabouts.

SMART HOMES

Smart home security systems possess several significant advantages over traditional home security models. With expanded and more effective capabilities, homeowners are increasingly inquiring about these to better protect themselves and loved ones from outside threats

1. Proactive Instead of Reactive
2. Monitor More Than Just Your Home
3. Stay in Control
4. Save Money on Energy Bills
5. Increase the Value of Your Home
6. Be Smart, Stay Smart.

INTRUSION ALARM SYSTEM / BURGLAR ALARM

A security alarm is a system designed to detect intrusion – unauthorized entry – into a building or other area. Security alarms are used in residential, commercial, industrial, and military properties for protection against burglary (theft) or property damage, as well as personal protection against intruders.

In its simplest form, an electronic alarm system is a low-voltage electrical circuit with sensors on entry doors and windows. When a door or window is opened, its sensor detects the interruption in the flow of electricity and triggers a warning signal such as a siren or strobe light.
